WYOMING HISTORICAL AGRICULTURAL STATISTICS

Record Highs and Lows in Wyoming Agriculture	6-7
Crops - Historical Estimates - Acres, Yield, and Production	8-17
Winter Wheat	8
Spring Wheat	9
Barley	10
Oats	11
Dry Beans	12
Sugarbeets	13
Corn	14
Alfalfa Hay	15
Other Hay	16
All Hay	17
Livestock - Historical Estimates	18-20
All Cattle, All Cows, Calf Crop, and Cattle on Feed, January 1 Inventory Numbers	18
All Sheep and Lambs, Breeding Sheep, Lamb Crop, and Wool Production, January 1 Inventory Numbers	19
All Hogs and Pigs, Breeding Hogs, Market Hogs, and Pig Crop December 1 Inventory Numbers	20

GENERAL INFORMATION

Wyoming Agriculture, 2001-02	22
Wyoming's Rank in the Nation's Agriculture	23
Rank of Wyoming Counties	23
Number of Farms and Ranches	24
Value of Farmland, Pasture Rent per Acre, and Private Grazing Fees	25
Value Added to U.S. Economy by Agricultural Sector	26
Cash Receipts by Commodities	27
Farm and Ranch Production Expenses	28
Value of Production by Commodities	29
County Value of Livestock Inventory and Crop Production	30

WEATHER DATA

Average Monthly and Annual Temperatures, 2002	32
Monthly and Annual Precipitation, 2002	33
Spring Freeze Hazard Table	34
Fall Freeze Hazard Table	35
Departures from Normal Precipitation Chart and River Drainage Area Map	36

LIVESTOCK DATA

Narrative	38
Cattle	39-47
Number of Operations, Total Inventory, and Value	39
Inventory by Class, Wyoming and U.S.	40
Supply and Disposition	41
Production and Income	42
Milk Cows and Milk Production	43
Milk and Cream Marketings	44
County Estimates	45-47
Cattle	45
All Cows	46
Milk Cows	47

Sheep	48-58
Number of Operations, Inventory, and Value	48
Inventory by Class, Lamb Crop and Wool Production	49
Supply and Disposition	50
Production and Income	51
Sheep and Lamb Losses by Cause	52-57
County Estimates - Breeding Sheep	58
Hogs	59-60
Number of Operations, Inventory, Value, and Pig Crop	59
Supply, Disposition, Production and Income	60
Chickens - Inventory, Egg Production, and Value	61
Bees and Honey	61
Red Meat Production	62

CROP DATA

Narrative & Crop Production Index	64
Acreage & Production by Cropping Practice	65-67
Wheat - Winter & Spring	65
All Wheat & Barley	66
Oats	67
Small Grains Production and Value	67
Corn, Sugarbeets & Potatoes, Production and Value	68
Dry Beans Production by Class & Value	69
Hay, Alfalfa, Other & All, Acreage and Production by Cropping Practice	70
Hay, Alfalfa, Other & All, Production and Value	71
Hay Stocks, May 1 & Dec 1	71
Alfalfa Seed Acreage and Production	71
Grain Stocks and Off Farm Storage Capacity	72
Winter Wheat Varieties, 1994-2003	73
Barley Varieties, 1996-2002	74

CROP COUNTY ESTIMATES, 2001 - 2002

Small Grains Distribution Maps	76
Winter Wheat	77
Spring Wheat	78
All Wheat	79
Barley	80
Oats	81
Row Crops and Hay Distribution Maps	82
Dry Beans	83
Sugarbeets	84
Corn	85
Alfalfa Hay	86
Other Hay	87
All Hay	88

PRICE DATA

Narrative	90
Prices Received for Cattle and Sheep - Graphs	91
Prices Received by Marketing Year & Month, Livestock and Crops, 1998-2002	92-94
Index Numbers of Prices Received, Monthly, 1998-2002	94
Prices Paid by Farmers and Ranchers, Selected Inputs, April 1, 1999-2003	95
Index of Prices Paid by Farmers and Ranchers, U.S., 1998-2002	95

Dear Reader,

Thank you, for taking the time to review the "2003 Wyoming Agricultural Statistics" book. The diversity of our agriculture economy benefits all of Wyoming's population by creating and sustaining employment, expanding the economy through value-added manufacturing and especially by providing an abundant food supply.

We are proud to claim that Wyoming has the finest crop and livestock genetics in the world. Our horses, cattle, sheep, grain and forage crops are recognized and often command a premium in our global marketplace. It is this quality that provides us with the opportunities for profit through diversification, specialization and economic efficiencies. It is this quality that allows us to provide the worlds finest food and fiber.

Mr. Coulter and his staff are our valued colleagues and associates. They work tirelessly to bring the citizens of our great state the most comprehensive agricultural data possible. The Agribusiness Division of the Wyoming Business Council tips our hat to them in thanks for doing a terrific job. The data that they compile helps our farmers and ranchers from Afton to Yoder plan for the future by reviewing the past and analyzing the present.

Our entire staff regularly utilizes and sends out this great document. It is on the corner of each of our desks. We hope you will find it equally as helpful.

Best regards,

Bill Bunce
Director, Agribusiness Division

National Agricultural Statistics Service, USDA

Dear Reader,

I am pleased to present the 2003 edition of "Wyoming Agricultural Statistics." Unfortunately, it documents that 2002 was another year of drought in Wyoming. The statistics reflect the pressure that a third year of drought in much of the state put on producers and production.

Inventory of all cattle and calves fell from 1.47 million head on January 1, 2002 to 1.29 million on January 1, 2003 - a 12 percent decline following a 5 percent drop the previous year. Beef cow inventory fell by 13 percent in 2002 and replacement heifers by 27 percent. Breeding sheep inventory dropped by 8 percent. Winter wheat production was down 21 percent from the 2001 crop, down 44 percent from 2000, and down 63 percent from 1999. Barley production was off 30 percent in 2002, oats off 40 percent, sugarbeets off 23 percent. All hay production was off 15 percent from 2002, off 23 percent from 2001, and 43 percent below 1999. To add to livestock producers problems with a shortage of grass, hay prices reached record highs.

These statistics about agriculture, compiled every year, allow comparisons to be made between drought years and more normal years. The data are important as efforts are made to provide emergency assistance such as the Livestock Feed Assistance program and the Livestock Compensation program. These numbers are possible only because Wyoming ranchers and farmers are willing to cooperate on the many surveys that we conduct. We always appreciate the time they take to do this, and we particularly appreciate it in years like 2002.

This annual book is possible only because of the cooperative efforts of several organizations. The Wyoming Business Council, Agribusiness Division funds the preparation of these pages. The Business Council and the University of Wyoming Agricultural Experiment Station fund the printing of the books. My office staff and our field and office enumerator staffs work all year to collect, analyze, and summarize the information included.

I thank everyone for their part in this important effort.

Sincerely,

Dick Coulter
State Statistician

RECORD HIGHS AND LOWS IN WYOMING AGRICULTURE: PRICES RECEIVED BY FARMERS AND RANCHERS

CROPS

Crop	Year Series Began	Record	Marketing Year Average Price		Monthly Price	
			Year	Price	Month/Year	Price
				Dollars per Bu.		Dollars per Bu.

WYOMING AGRICULTURE 2001-02

The value of the ag sector output in Wyoming annually approaches or exceeds one billion dollars with cash income historically around \$800 million. In 2002, 9,200 farms and ranches were operating in Wyoming with a total land area of 34.6 million acres. Wyoming ranks eighth nationally in total land in farms and ranches and first in average size of farms and ranches. According to the Wyoming Division of Economic Analysis, the agricultural sector — farm and ag services — provides over 17,000 jobs. The cattle industry is by far the largest component of Wyoming agriculture accounting for over 70 percent of all cash receipts. Cattle also led the way in 2002 in terms of value of production at \$444.8 million. All livestock production was valued at \$494.0 million, down 19 percent from 2001. Sheep and hogs were far behind cattle with value of production at \$21.4 million and \$14.3 million.

Hay is by far the leading crop in Wyoming in terms of value of production — a drought reduced \$173.8 million in 2002, but most is marketed through livestock. **Sugarbeets** had the next highest crop value in 2002 at \$26.2 million, followed by **barley** at \$15.9 million, **corn** at \$12.1 million, **dry beans** \$11.6 million, and **wheat** \$10.3 million. In terms of cash receipts, hay and sugarbeets are usually close contenders for the leading crop followed by barley.

Cattle and calves inventory on January 1, 2003 totaled 1.29 million head, valued at \$980 million. Cattle inventory declined 12 percent in 2002. The January 1, 2003 inventory of **sheep and lambs** was 460,000 head, valued at \$41.9 million. Breeding sheep inventory in Wyoming decreased 8 percent in 2002 due to an 8 percent drop in ewes and a 7 percent drop in replacement lambs. **Hog and pig** inventory slipped 2 percent in 2002 totaling 115,000 on December 1, 2002. The decline was due to a drop of 1,000 head in both breeding and market hogs. Hog and pig inventory value on December 1, 2002 was \$9.7 million.

1/A farm is any establishment from which \$1,000 or more of agricultural products were sold or would normally be sold during the year. Beginning in 1997, farm numbers are for the entire year. Prior farm numbers are for a June 1 reference date.

2/Sales class estimates available for Wyoming beginning in 1998.

1/Data from Table entitled, "Value added to the State's economy by the agricultural sector via the production of goods and services, 1990-2001", Economic Research Service, USDA, *Internet Web Site* (www.ers.usda.gov/data/farmincome/finfidmu.htm), Revised July 30, 2002.

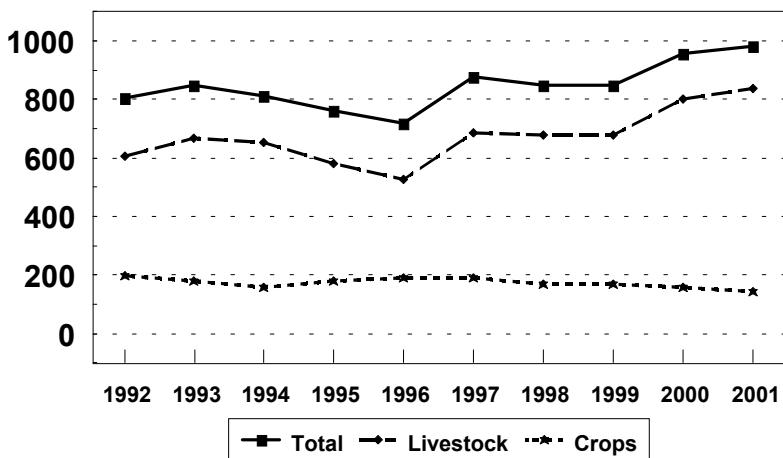

2/A positive inventory adjustment value represents current year production not sold by December 1. A negative inventory adjustment value is an offset to production from prior years included in current year sales.

Note: The value-added format is now used to present the agricultural sector income accounts for the U.S. and states, replacing the traditional net farm income format. The underlying accounting concepts remain the same under both formats and the value for net farm income is identical. Changes in commodity production is the cause of most of the volatility in the income accounts, and the presence of more disaggregated components under the value-added format makes it easier to discern what forces are driving the changes and trends in farm income. In addition, the value-added approach to the sector accounting has the advantage of being the format accepted and utilized internationally, thereby enabling comparison across countries.

Note: The cash receipts figures used in this table may differ from those in the table on Page 27 because that table is updated more frequently than this one.

1/The 2002 value of sugarbeet production is based on 2001 price and 2002 production. The 2002 price is not available until January 2004. The 2002 market year price for other crops is preliminary based on prices through November 2002. Crop value excludes oilseeds and other minor crops.

2/Adjustments made for changes in inventory and for inshipments.

3/Value of sales.

4/Potato estimates discontinued following 1999 crop.

Land Use and Agricultural Value in Wyoming Counties

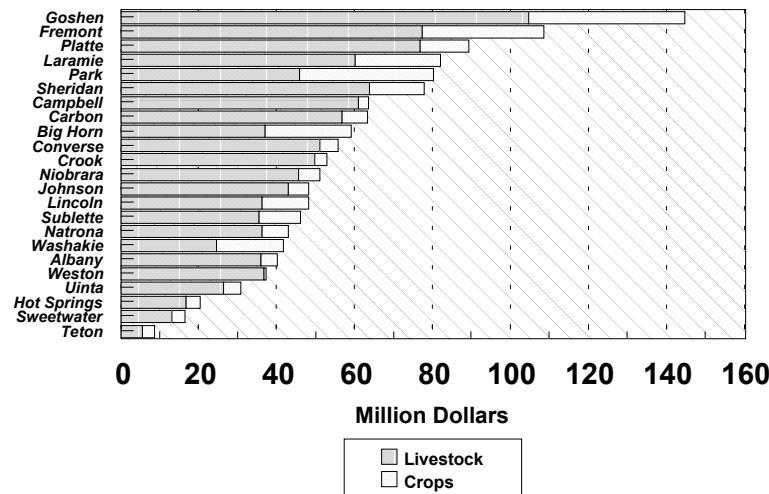

The following estimates of the county value of livestock inventories are based on State average inventory values multiplied by county livestock inventory estimates. The reference date for cattle and sheep is January 1, 2003 and for hogs is December 1, 2002. The value of livestock also includes 2002 wool and milk production apportioned to counties based on the number of sheep and milk cows. For crops, the 2002 county production estimates are multiplied by preliminary marketing year average prices for the State. The previous year price is used for sugarbeets. Crops include alfalfa and other hay, all wheat, barley, oats, corn grain and silage, dry beans, and sugarbeets.

Departures From Normal Precipitation

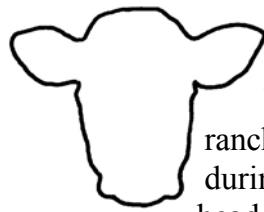

Wyoming River Drainage Areas, 2002

RIVER DRAINAGE AREAS

LIVESTOCK

The number of **cattle and calves** on Wyoming farms and ranches decreased 12 percent during 2002 from 1,470,000 head on January 1, 2002 to 1,290,000 on January 1, 2003. The inventory of beef cows decreased by 109,000 head (13 percent) to 706,000 head. Beef cow replacement heifers declined sharply by 27 percent to 120,000 head. The total inventory of other heifers, steers, and all calves under 500 pounds was down 21 percent from the previous year. The 2002 calf crop, at 780,000 calves, was down 7 percent from the previous year. The January 1, 2003 average value per head for all cattle and calves was \$760.00, down \$20.00 from a year earlier.

The number of **milk cows** in Wyoming herds during 2002 averaged 4,400 head, down from the 4,500 head in 2001. Milk production in 2002 totaled 63.4 million pounds, up slightly from 63.0 million in 2001. Average production per cow rose 409 pounds to 14,409 pounds. The average price per hundredweight received for milk fell \$2.80 to \$11.40 in 2002.

The number of **hogs and pigs** in Wyoming on December 1, 2002 was 115,000 head, down 2 percent from a year earlier. Breeding inventory decreased 1,000 head to 20,000, and market hogs and pigs slipped 1,000 head to 95,000. The 2002 pig crop totaled 365,000 pigs, up 17 percent from 2001. The average value per head for hogs and pigs was \$84.00 on December 1, 2002, down \$7.00 from a year earlier.

Sheep and lamb inventory in Wyoming on January 1, 2003 totaled 460,000 head, down 4 percent from the previous year. Breeding sheep, including ewes, rams, and replacement lambs, dropped 8 percent from the previous year to 360,000 head. The 2002 lamb crop totaled 340,000 lambs, down 1 percent from 2001. An average of 106 lambs were saved per 100 ewes. The average value per head for sheep and lambs rose from \$80.00 on January 1, 2002 to \$91.00 on January 1, 2003.

Sheep and lamb losses to all causes during 2002 totaled 72,000 head, down 1,000 head from 2001. Losses to predators were down 2,000 head from the previous year to 45,000 head, while non-predator losses rose by 1,000 head. Lamb predator losses (before and after docking) represented 10 percent of the 2002 lamb supply (lamb crop plus lambs lost before docking). Total predator losses were valued at \$2.37 million and all losses at \$3.96 million.

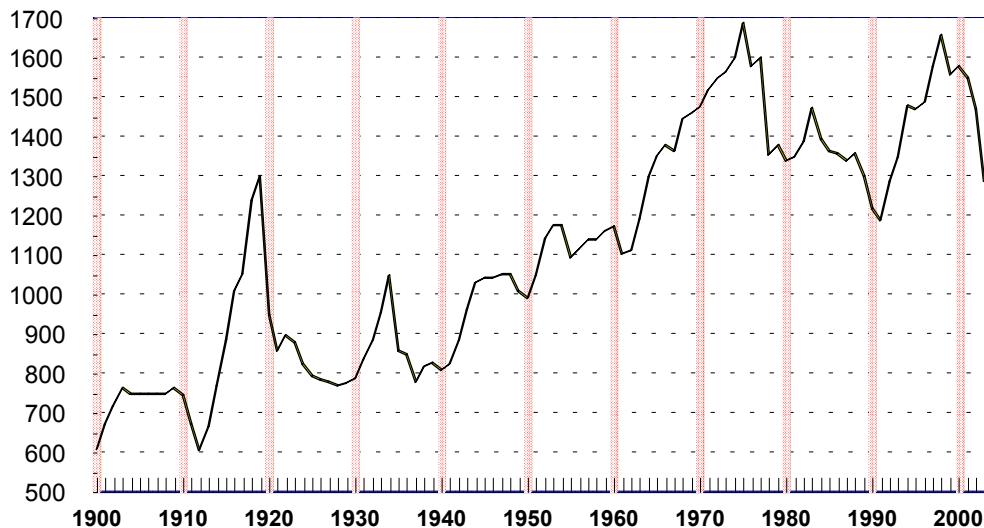

Wyoming sheep and lambs produced 3.75 million pounds of wool in 2002, down 5 percent from 2001 to a new record low. The price per pound averaged 73 cents, up from 51 cents in 2001, and the total value of wool jumped 36 percent to \$2.74 million.

There were an estimated 17,000 **chickens** in Wyoming flocks on December 1, 2002, unchanged from a year earlier. An average of 12,000 hens and pullets of laying age produced 3.6 million eggs in the 12-month period ending December 1, 2002, unchanged from the previous year.

SHEEP LOSSES TO ALL CAUSES - 2002

Wyoming sheep and lamb producers lost an estimated 72,000 head of sheep and lambs to predators, weather, lambing problems, disease and other causes in 2002 according to our annual survey. Total losses were nearly unchanged from the previous year. Predators accounted for 63 percent of the losses. The 2002 lamb crop totaled 340,000 lambs marked, docked, or branded which was 5,000 fewer than in 2001. Adding in the lambs lost before docking results in a potential lamb supply of 370,000 head. Of these, 15 percent were lost to various causes.

These data are based on reports from producers on our annual January Sheep Survey. We thank all Wyoming ranchers and farmers for their help with this survey. We also thank the Wyoming Business Council, Agribusiness Division who funds this report as part of the annual agreement with our agency to provide statistics for Wyoming agriculture.

HIGHLIGHTS

PREDATOR AND OTHER LOSSES STEADY: Wyoming sheep producers lost 45,000 sheep and lambs to predators in 2002, down only 2,000 head from 2001 despite a smaller breeding herd and lamb crop. Coyotes were again the biggest predator taking 66 percent of the total predator losses and 42 percent of all losses. Losses to weather, disease and other non-predator increased by 1,000 head.

ALL LAMB LOSSES DOWN 3 PERCENT: Sheep producers lost 56,000 lambs before or after docking in 2002, 3 percent less than in 2001. Losses to predators accounted for 68 percent of the total or 30,000 head, which was down 3,000 head from 2001. Losses of lambs to weather, disease, and other non-predator causes were up 1,000 head.

SHEEP LOSSES UP 7 PERCENT: Sheep losses in Wyoming during 2002 totaled 16,000 head, up 1,000 head from 2001. Predator losses were up 1,000 head to 7,000 while non-predator losses were unchanged at 9,000.

VALUE OF LOSSES UP 8 PERCENT: Sheep producers in Wyoming lost an estimated \$3.96 million from sheep and lamb deaths in 2002, up 6 percent from the previous year as lamb prices were higher. Predation accounted for \$2.37 million or 60 percent of the total value.

1/Totals may not add due to rounding.

2/Includes total beef, veal, pork, lamb and mutton, excluding farm slaughter.

3/Number of calves slaughtered in Wyoming not shown because of insignificant numbers.

2002 CROP YEAR IN REVIEW

Coming off drought years in 2000 and 2001, above normal Spring moisture was needed in 2002 to replenish soil moisture and water supplies. However, that was not to be. On April 1 only about a third of the state had adequate topsoil moisture and about half of that had adequate subsoil moisture. **April and May** brought mostly below normal precipitation, and record high temperatures arrived in **late May**. Hot, dry, windy conditions continued into **June** which stressed small grain crops.

At the end of June, only 6 percent of the state had adequate topsoil moisture. Wheat was in mostly poor condition and other crops in poor to fair condition. Excessively hot temperatures into the triple digits continued in **July**. Early shipping of livestock from summer ranges and heavier culling of herds was again necessary. **August** brought some moisture and a little relief from temperatures in some areas but it was only temporary and too little. A reduced small grain and hay harvest was finished near average pace. Welcome rain arrived in early **September** but was too late for summer pastures. Good harvest weather in **October** enabled a late row crop harvest to be completed.

Average yields per acre in 2002 were again at low levels and even lower than the previous year for winter wheat, spring wheat, barley, other hay, sugarbeets and corn. Only oats saw a significantly higher average yield but a much smaller percentage of acreage was harvested for grain.

WINTER WHEAT production in 2002 fell 21 percent from 2001 to the lowest level since 1965. Harvested acreage was unchanged but average yields per acre fell 5 bushels to only 19 bushels per acre.

SPRING WHEAT production in 2002 was the smallest on record. Only 4,000 acres were harvested for grain. Average yield per acre was four bushels less than in 2001, resulting in a 43 percent drop in total production.

BARLEY production in 2002 fell 30 percent from 2001 to the smallest crop since 1967. Harvested acreage fell 18 percent from the previous year and yields averaged 70 bushels per acre, down 12 bushels from 2001.

OATS production in 2002 totaled a paltry 810,000 bushels, 40 percent less than in 2001 and the smallest since 1900. Grain was harvested from only 15,000 acres, the smallest total on record.

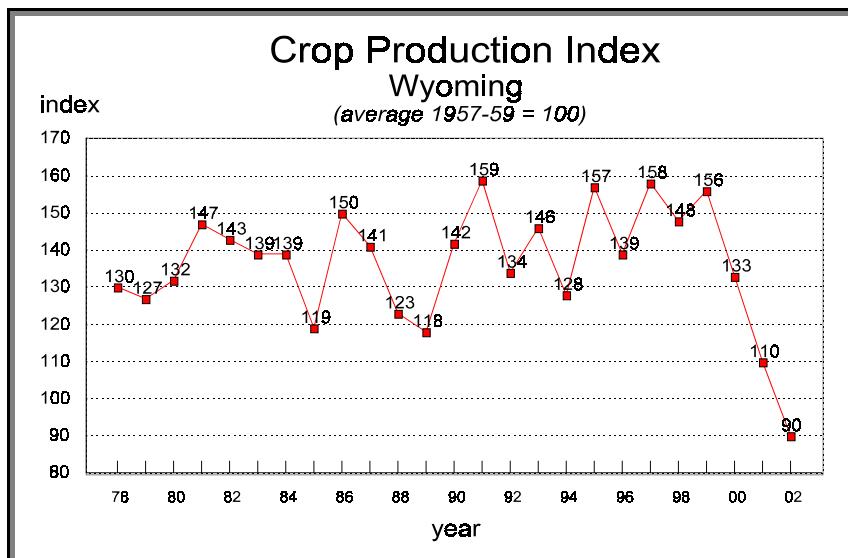

CORN FOR GRAIN production dropped by 30 percent from 2001, the smallest since 1993. Acreage harvested for grain was down 29 percent and average yields were off 1 bushel from the 2001 average. **CORN FOR SILAGE** production was down 7 percent from the previous year as a 3 ton drop in yield per acre more than offset an 8 percent increase in acres cut for silage.

DRY BEAN output in 2002 increased by 21 percent from 2001 but was still down 18 percent from 2000. Acreage harvested increased 21 percent and average yield was up 10 pounds per acre.

SUGARBEET production dropped 23 percent below 2001 to the lowest level since 1984. Acreage harvested was down 13 percent and average yield per acre was down 2.3 tons.

ALFALFA HAY production in 2002 fell by 10 percent from 2001 to 1.15 million tons, the smallest since 1985. Acreage cut for alfalfa was off 14 percent but average yields were up 5 percent. Production of all **OTHER HAY** dropped by 26 percent from 2001 to the lowest level since 1954. Acreage cut was a record low 450,000 acres. **ALL HAY** production fell 15 percent in 2002 and was the smallest hay crop since 1969.

ALFALFA SEED production in 2002 totaled 1.92 million pounds of seed from 3,750 acres according to the Wyoming Seed Certification Service. Production was off 64 percent from 2001.

Acres Seeded 4/	10,000	162,500	7,500	180,000

1/District 2 includes Campbell, Crook, Johnson, Sheridan, and Weston Counties.

2/District 5 includes Converse, Goshen, Laramie, Niobrara, and Platte Counties.

3/Other varieties are shown in the footnote to the table above.

4/Preliminary District acreage estimates.

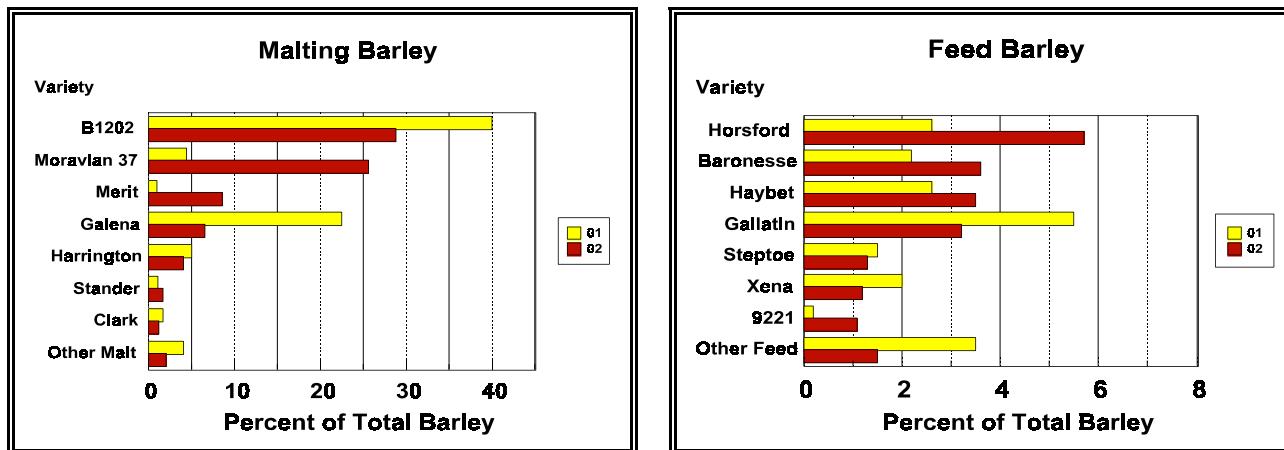

BARLEY: PERCENT OF TOTAL ACREAGE SEEDED BY VARIETY, WYOMING, 1996-2002

Variety	1996	1997	1998	1999	2000	2001*	2002

PRICES

The Wyoming All Commodities Price Index in 2002 was below the previous year in all but one month due to lower livestock prices. In January, the index was at a high of 106 (1990-92=100), but lower livestock prices for the rest of the year kept the index below that level. The low for the year was 94 in May. The All Livestock Index, which drives the All Commodities Index in Wyoming, was lower in 2002 than in 2001 in all months. The Index hit a high of 101 in January and February and a low of 88 in May. The All Crops Index remained above the previous year's index in all months of 2002. The index was driven by a second year of record high hay prices and wheat prices not seen since 1997. The index started at 120 in January, reached a high of 133 in September and November, and ended at 131 in December.

Beef Cattle prices varied from the mid \$60's to mid \$70's per cwt. in 2002. The average price for the year was \$71.90 per cwt., down \$9.30 from 2001 and down \$9.60 from 2000. Prices peaked at \$77.20 in February before sliding to \$66.00 in December.

Combined Steer and Heifer prices varied from the mid \$70's to mid \$80's per cwt. in 2002. The average price for the year was \$79.50 per cwt., down \$9.30 from 2001 and down \$8.00 from 2000. Prices recovered after a low of \$75.30 in May to end the year at \$86.10.

Calf prices averaged below the \$100 mark for the last two-thirds of 2002. The high for the year was \$106.00 in February and the low was \$87.60 in June. The average price for the year was \$92.60 per cwt., down \$13.40 from 2001 and down \$14.40 from 2000.

Sheep prices averaged \$29.10 per cwt. in 2002, down 90 cents from 2001. Monthly prices ranged from a low of \$21.90 per cwt. in June to a high of \$43.20 per cwt. in December. Lamb prices rose steadily higher in the second half of 2002. The average price for the year was \$78.90 per cwt., up \$8.10 from 2001. Prices hit a high of \$89.40 in December 2002 while the low was \$68.60 in January.

Wool prices climbed higher in 2002 to levels not seen since 1998. The marketing year average was 73 cents per pound compared with 51 cents in 2001 and 47 cents in 2000.

Hog prices in 2002 were lower than 2001 for all months during the marketing year. Prices started the marketing year in December 2001 at \$30.70 per cwt., rose to a high of \$36.90 in May 2002 and finished at a low of \$25.80 in November. The market year average price for hogs, at \$31.30 per cwt., was down \$12.30 from 2001.

Milk prices decreased in 2002 from the previous year's higher prices. The marketing year average price for 2002

was \$11.40 per cwt., down \$2.80 from 2001. Prices decreased from a high of \$13.10 to start the year to a low of \$9.80 in August, then finished the year at \$11.20 in December.

Hay prices for the 2002 crop rose steadily throughout the year and set record high prices for the second year due to continuing dry conditions. All hay started the marketing year in June 2002 at \$104.00 per ton and hit a peak of \$113.00 in March and April 2003. The preliminary marketing year average price for alfalfa, at \$110.00 per ton, was unchanged from 2001. The preliminary marketing year average price for other hay was \$105.00 per ton, also unchanged from 2001.

Wheat prices during the 2002 crop marketing year improved from 2001. The preliminary marketing year average price, at \$4.35 per bushel, was up \$1.65 from 2001. The monthly high was \$4.67 per bushel in October 2002.

Corn prices were also higher for the 2002 crop year. The preliminary marketing year average price was \$2.70 per bushel, up 40 cents from 2001. The monthly price hit the high for the year in April 2003 at \$2.95 per bushel.

Feed Barley prices were mixed during the 2002 marketing year, but remained above the \$2.00 mark for the year. The monthly high for the year was \$2.16 per bushel in March 2003, while the low was \$2.04 in August and September 2002.

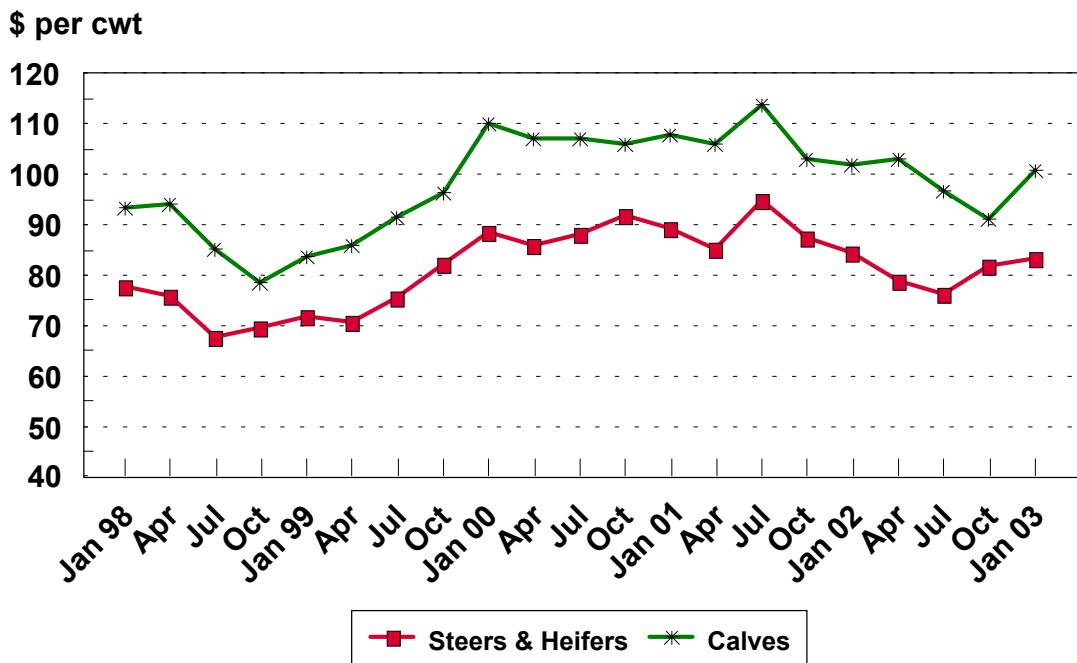

Oats prices averaged \$2.20 per bushel during the 2002 marketing year, up 55 cents from 2001. The monthly high was \$2.20 per bushel in October 2002, and the low was \$1.92 in July 2002.

Dry Bean prices began the marketing year higher than a year earlier, but declined quickly from their high of \$22.70 in September 2002. The preliminary marketing year average price was \$18.60 per cwt., down \$4.40 from 2001, but \$1.80 higher than 2000. The low was \$16.50 per cwt. in February 2003.

The 2002 **Prices Paid Index** for the U.S. was slightly higher than 2001. Prices paid by farmers and ranchers in the Mountain region on April 1, 2003 were higher than a year earlier for fuel, fertilizer, and livestock feed.

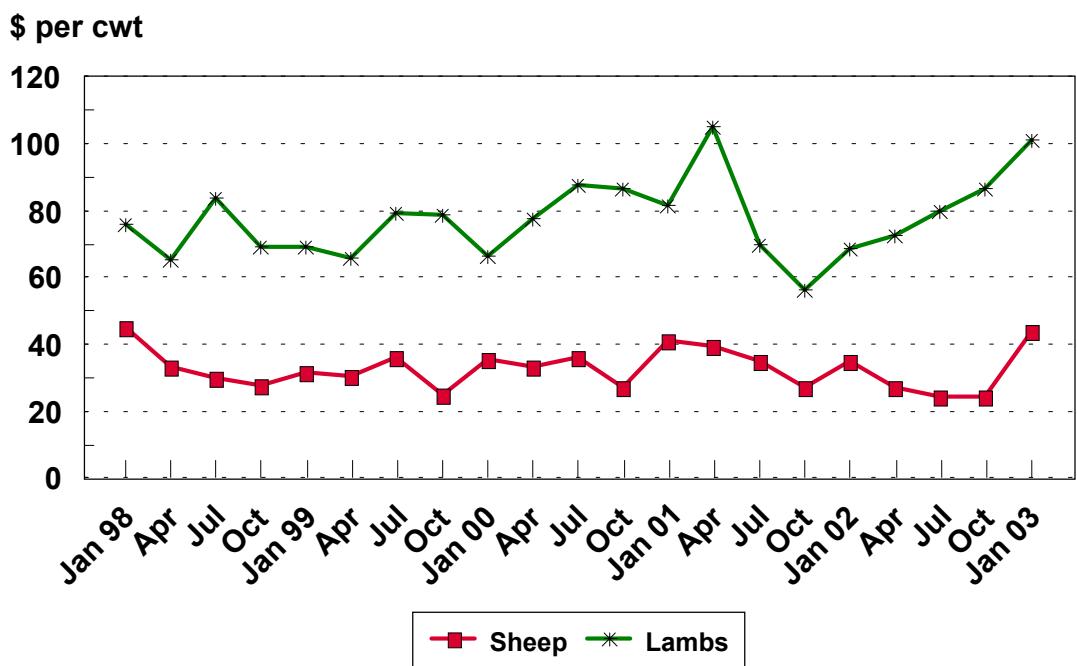

Prices Received for Cattle & Calves

Jan 1998 - Jan 2003, Wyoming

Prices Received for Sheep & Lambs

Jan 1998 - Jan 2003, Wyoming

College of Agriculture 2003

Given the significance of agriculture to natural resource sustainability and the well being of communities and individuals, Wyoming citizens have a stake in the direction taken and the accomplishments achieved by the College of Agriculture. During May 2002, personnel from the College of Agriculture traveled to eight communities across the state to seek the vision of Wyoming citizens regarding their desires for Wyoming's agriculture, natural resources, and rural communities in 2012. Significant issues identified in public visioning sessions include the importance of (a) land use, environmental concerns, and improved public understanding of agriculture, private property, and federal land issues; (b) forage-based livestock systems and healthy livestock and wildlife; (c) the family farm/ranch (youth development and young people in agriculture); (d) vibrant small communities, community leadership, and an information basis for decision-making; (e) the profitability of agriculture and economic diversity including niches and value-added products; (f) agriculture, multiple use, and the Endangered Species Act; (g) water quality and availability; (h) the reclamation of disturbed lands and waters; and (i) the involvement of local citizens and agriculture in community and state decision-making processes. These strategic issues will guide the educational, research, and outreach efforts of the college in serving our many stakeholders. Individuals, families, and communities need relevant research and educational partnerships to deal with issues that affect them.

Research and educational programs in the College of Agriculture extend beyond the UW campus in Laramie. Educational programs are offered to off-campus clientele by the UW Cooperative Extension Service, which has offices in all 23 Wyoming counties and the Wind River Indian Reservation. Research projects are conducted at four Research and Extension (R&E) Centers and with individual cooperators across the state. Please feel free to visit or contact any of the centers:

Archer R&E Center	307.632.7905	baumgart@uwyo.edu
Powell R&E Center	307.754.2223	pthompsn@uwyo.edu
Sheridan R&E Center	307.737.2415	wyarno@uwyo.edu
Torrington R&E Center	307.532.7126	vmstull@uwyo.edu

The UW seed certification service office moved to the Powell Research & Extension Center in January 2003. A new Wyoming Department of Agriculture seed analysis laboratory to be operated by the UW College of Agriculture is being constructed at the Powell Research & Extension Center. The "Denny Smith Memorial Seed Analysis Laboratory," funded by the 2002 Wyoming State Legislature, is scheduled to open in July 2003. The co-location of the UW seed certification service and Wyoming seed analysis laboratory at the Powell Research & Extension Center will assist Wyoming's seed industry in producing and marketing high-quality seed crops. If you are interested in growing certified seed, call 307.754.9815 or e-mail Mike Moore <mdmoore@uwyo.edu>.

Understanding the life cycle of mosquitoes, which transmit diseases like West Nile virus to humans and animals, is critical to predicting and controlling the spread of such diseases. Jack Lloyd of the Department of Renewable Resources is working with public health and mosquito control officials to document the distribution of potential disease-carrying species throughout the state. Entomologists from the University of Wyoming have conducted workshops on mosquito identification for the Wyoming Mosquito Abatement Association at meetings across the state, and a one-credit-hour mosquito course is being prepared for Wyoming weed and pest control workers.

Bovine Virus Diarrhea (BVD) is arguably the most economically important disease of cattle in Wyoming. The BVD virus can cause abortion, stillbirth, weak calves, birth defects, and a variety of acute febrile disease syndromes that may be fatal in growing and adult cattle. Of considerable importance is the production of persistently infected (PI) calves. Although often asymptomatic, these animals are the most significant source of virus to other cattle, especially in closed and/or well-managed herds. After birth, such calves shed large quantities of virus throughout their lifetimes. Thus, detection and elimination of PI calves is an essential part of controlling the disease. At present there are several diagnostic tests used to detect PI animals. The "gold standard" - virus isolation from blood, is expensive and time-consuming; however, a recent study by the Department of Veterinary Sciences demonstrated that both the ear-notch immunohistochemistry (IHC) test and the ear-notch antigen capture ELISA test produce similar results with sensitivities of greater than 98 percent and specificities of 100 percent. The ELISA test can be performed in approximately half the time necessary for the IHC test and is less subject to human and technical errors. Unfortunately, both the IHC and ELISA tests appear to detect most or all acutely (i.e., not persistently) infected calves, thus confirmatory testing at a 30-day interval may be necessary to differentiate acutely infected calves from true persistently infected calves.

Steve Paisley, beef cattle extension specialist in the Department of Animal Science, with support from the agribusiness division of the Wyoming Business Council, has developed a Wyoming Beef Quality Assurance (BQA)-Certified Cattle Listing Service Web site as a marketing aid for producers. Cattle advertised through the Web site are marketed through traditional methods such as an auction barn, a video auction, or a private treaty, which provides exposure of BQA-certified cattle to a larger audience. The Web site is designed to promote Wyoming cattle that were produced by BQA guidelines. In addition to in-depth cattle listings, the Web site, www.wyobeef.com, also provides information on Wyoming's BQA program, how to become BQA certified, and an online registration form.

The college offers several programs that provide students with hands-on experiences. Active participation in research supported by the Paul Stock Foundation and internships with industry and state and federal agencies offer students first-hand job experience prior to graduation. The College of Agriculture is constantly seeking students who will provide future leadership and serve as good stewards of natural resources. For additional information about the college's research, education, and extension programs, browse the college's Web site at www.uwyo.edu/agcollege, or contact any of the college's seven departments:

WYOMING AGRICULTURAL STATISTICS SERVICE REPORTS

ISSUED DURING THE YEAR

	<u>Frequency</u>	<u>Approximate Date of Publication</u>
GENERAL REPORTS:		
Crop Weather	Weekly	April-October (Mondays)
"Range Review" - Summary of latest results	Monthly	1st-18th
"Wyoming Agricultural Statistics" - Annual summary	Annual	July
2002 Census of Agriculture	Every 5 years	February 2004
REPORT DATES FOR CROPS: 1/		
Winter Wheat Seedings	Annual	January (9th-12th)
Prospective Plantings	Annual	March (28th-31st)
Acreage Planted	Annual	June (28th-30th)
Crop Production Forecasts	Monthly	May-November (9th-12th)
Dry Edible Bean Acreage by Class	Annual	August (9th-12th)
Dry Edible Bean Production by Class	Annual	December (9th-12th)
Summary of Crop Production	Annual	January (9th-12th)
Value of Crop Production	Annual	February (9th-12th)
Wheat Varieties	Annual	March
Barley Varieties	Annual	July
Hay Stocks	Semi-Annual	May, December (9th-12th)
REPORT DATES FOR LIVESTOCK, DAIRY, POULTRY, AND LIVESTOCK PRODUCTS: 1/		
Cattle Inventory and Calf Crop	Semi-Annual	January or February (5th Friday of year), and July (3rd Friday)
Sheep Inventory and Lamb Crop	Semi-Annual	January or February (5th Friday of year), and July (3rd Friday)
Sheep Shorn and Wool Production	Annual	January or February (5th Friday of year)
Sheep and Lamb Loss	Annual	February (3rd Friday)
Hog Inventory and Pig Crop	Annual	December (last Friday of year)
Livestock Slaughter	Monthly	20th-26th
Meat Animals - Production, Disposition, and Income	Annual	mid- to late- April
Milk Cows and Milk Production	Quarterly	January, April, July, October (13th-16th)
Bee Colonies and Honey Production	Annual	mid- to late- February
COUNTY ESTIMATES: (available at www.nass.usda.gov/wy)		
Wheat, Oats, and Barley	Annual	February
Corn	Annual	March
Hay - All, Alfalfa, and Other	Annual	March
Sugarbeets and Dry Beans	Annual	June
Livestock - Cattle and Breeding Sheep	Annual	April
All Crops, Cattle, and Sheep	Annual	In "Wyoming Agricultural Statistics" in July
PRICES AND MISCELLANEOUS: 1/		
Farm Labor	Quarterly	February, May, August, and November (15th-21st)
Agricultural Prices	Monthly	End of month
County Ag Values and Receipts	Annual	August
Number of Farms and Land in Farms	Annual	February (10th-18th)
Farm Production Expenditures	Annual	July
Agricultural Land Values	Annual	August

1/Same day news releases are issued for most reports. Summaries of these reports will appear in the next issue of the "Range Review". Separate reports are also printed for Sheep Loss, Wheat Varieties, and Barley Varieties and the annual book, "Wyoming Agricultural Statistics". All reports are available on the Internet at www.nass.usda.gov/wy

WHERE TO FIND HISTORICAL COUNTY ESTIMATES

County estimates for crops are first published in the **Wyoming Agricultural Statistics** bulletin for the year following that crop year. Livestock county estimates have a January 1 reference date and are first published later that same year. Estimates are subsequently open for revision a year later as part of the annual review process. Revised estimates would be published in the following year's bulletin. Also, at 5-year intervals historical revisions are considered in conjunction with the publication of Census of Agriculture results. Thus, it is possible that as many as three different sets of estimates could be published over time for one commodity and year.

The tables below can be used to determine which bulletin contains the latest county statistics for any year. To use the tables, locate the commodity and year in which you are interested in the body of the table. The year at the top of the corresponding column is the year of the bulletin containing the latest county estimates for that commodity and year. Estimates for some earlier years not in the table are also available by request. If you have any questions, please call us at 1-800-892-1660.

You can also find historical county estimates on our website at www.usda.gov/nass. Click on "*Quick STATS.*"
